

1. Download and Install 64-bit Java

You'll need to download and install the **64-bit Java SE JDK** (Java Development Kit). Here's how:

1. **Go to the official Java download page:** [Java SE Downloads](#)
 2. **Download the 64-bit version:**
 - For **Windows**: Download the Windows x64 JDK installer.
 - For **Mac**: Download the macOS x64 installer.
 - For **Linux**: Download the appropriate version for your system (e.g., .tar.gz or .rpm).
 3. **Install Java:** Follow the instructions on the website to install the **64-bit version** of Java.
-

2. Set the JAVA_HOME Environment Variable

After installing the 64-bit Java version, you'll need to **set the JAVA_HOME environment variable** so that H2O can find and use it.

- On **Windows**:
 1. Go to **Control Panel > System and Security > System > Advanced system settings**.
 2. Click **Environment Variables**.
 3. Under **System variables**, click **New**.
 4. Set the **Variable name** to JAVA_HOME and the **Variable value** to the path where Java is installed, like C:\Program Files\Java\jdk-24.
 5. Click **OK** and restart your system.
- On **Mac/Linux**:
 1. Open your terminal.
 2. Set the JAVA_HOME environment variable by adding this line to your .bash_profile or .zshrc (depending on your shell):

`export JAVA_HOME=/Library/Java/JavaVirtualMachines/jdk-24.jdk/Contents/Home`

3. After editing the profile file, run:

`source ~/.bash_profile # or source ~/.zshrc`

4. Verify by running:

`echo $JAVA_HOME`
